Quadratic Deflation ETF

Ticker Symbol: **BNDD**

Fund shares are not individually redeemable. Fund shares will be listed on NYSE Arca, Inc. ("Exchange").

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities or passed upon the accuracy or adequacy of this Prospectus. Any representation to the contrary is a criminal offense.

As permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Fund's shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from the Fund (if you hold your Fund shares directly with the Fund) or from your financial intermediary, such as a broker-dealer or bank (if you hold your Fund shares through a financial intermediary). Instead, the reports will be made available on a website, and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. If you hold your Fund shares directly with the Fund, you may elect to receive shareholder reports and other communications electronically from the Fund by contacting the Fund at 855-857-2638 or, if you hold your Fund shares through a financial intermediary, by contacting your financial intermediary.

You may elect to receive all future reports in paper free of charge. If you hold your Fund shares directly with the Fund, you can inform the Fund that you wish to continue receiving paper copies of your shareholder reports at 855-857-2638 or, if you hold your Fund shares through a financial intermediary, by contacting your financial intermediary. Your election to receive reports in paper will apply to all of the KraneShares Funds you hold directly with series of the Trust or through your financial intermediary, as applicable.

Fund Summary

Quadratic Deflation ETF

Investment Objective

The Quadratic Deflation ETF (the “Fund”) seeks to benefit from lower growth, deflation, lower or negative long-term interest rates, and/or a reduction in the spread between shorter and longer term interest rates by investing in U.S. Treasuries and options. As a secondary goal, the Fund seeks to adhere to Environmental, Social and Governance (“ESG”) principles by excluding investments in issuers that are involved in and/or that derive significant revenue from, certain practices, industries or product lines and by increasing the representation of underrepresented groups in the governance of ETFs.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy, hold, and sell shares of the Fund. You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees (fees paid directly from your investment) None

Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.99%
Distribution and/or Service (12b-1) Fees*	0.00%
Acquired Fund Fees and Expenses	0.04%
Other Expenses**	0.01%
Total Annual Fund Operating Expenses	1.04%
Fee Waiver***	-0.05%
Total Annual Fund Operating Expenses After Fee Waiver	0.99%

* Pursuant to a Distribution Plan, the Fund may bear a Rule 12b-1 fee not to exceed 0.25% per year of the Fund's average daily net assets. However, no such fee is currently paid by the Fund, and the Board of Trustees has not currently approved the commencement of any payments under the Distribution Plan.

** “Other Expenses” reflect estimated amounts based on the current fiscal year.

*** Krane has contractually agreed to waive its management fee by 0.05% of the Fund's average daily net assets (“Fee Waiver”). The Fee Waiver will continue until August 1, 2022 and may only be terminated prior thereto by the Board.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same, except that it reflects the Fee Waiver for the period described above. This Example does not reflect any brokerage commissions that you may pay on purchases and sales of your shares. Although your actual costs may be higher or lower, based on these assumptions, whether you do or do not sell your shares, your costs would be:

<u>1 Year</u>	<u>3 Years</u>
\$101	\$326

Fund Summary

Quadratic Deflation ETF

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. Because the Fund had not commenced investment operations as of the date of this prospectus, it does not have portfolio turnover information for the prior fiscal year to report.

Principal Investment Strategies

The Fund is actively managed by the Fund’s investment sub-adviser, Quadratic Capital Management LLC (“Quadratic” or the “Sub-Adviser”), and seeks to achieve its investment objective primarily by investing, directly or indirectly, in a mix of U.S. Treasury securities (“Treasury”) and option strategies (as defined below) tied to the shape of the U.S. interest rate swap curve (described below). The Fund’s strategy is designed to hedge against deflation risk and generate positive returns from the Fund’s options during periods when the U.S. interest rate curve flattens (i.e., the spread between interest rates on U.S. long-term debt instruments and U.S. shorter-term debt instruments tightens) or inverts.

The Fund is also designed to adhere to ESG principles, as reflected in the framework published by the Sustainability Accounting Standards Board (“SASB”), by excluding investments in issuers that are involved in and/or that derive significant revenue from, certain practices, industries or product lines, including Extreme Event Controversies, Controversial Weapons, UN Global Compact Violations, Civilian Firearms, Thermal Coal Extraction and Tobacco. Further, the Fund represents an ESG “impact” investment insofar as Quadratic is a registered Small/Minority Business Enterprise and a majority woman-owned firm and, thus, an investment in the Fund advances certain ESG governance principles (such as increasing the representation of women in senior management and board positions in the U.S.).

The Fund invests in Treasuries of various maturities directly or through other exchange-traded funds (“ETFs”) that invest in Treasuries. The “option strategies” used by the Fund are options strategies of various maturities that are tied to the shape of the U.S. interest rate swap curve and structured to limit the loss to the Fund and include long options, long spreads and butterflies. The U.S. interest rate swap curve is a type of interest rate curve that reflects the fixed interest rates used in interest rate swap agreements with different maturities. (“Swap rates” are a fixed interest rate exchanged for a floating interest rate in an interest rate swap). The Fund may buy options, long spreads and “butterflies”. Long spreads involve buying one call (put) option and selling another call (put) option to create a range consisting of a lower (higher) strike price and an upper (lower) strike price and the maximum loss should be limited to the premium paid. Butterflies involve buying a call (put) with a lower (higher) strike price, selling two call (put) options with an intermediate strike price, and buying one additional call (put) option with a higher (lower) strike price and the maximum loss should be limited to the premium paid.

The option strategies used by the Fund are expected to (i) appreciate in value as the curve flattens or inverts (i.e., lower or negative long-term interest rates and/or a reduction in the spread between shorter and longer term interest rates) and (ii) decrease in value or become worthless as the curve steepens. The U.S. interest rate swap curve “flattens” when the spread between swap rates on longer-term debt instruments and shorter-term debt instruments narrows, “steepens” when such spread widens, and “inverts” when swap rates on longer-term debt instruments become lower than those for shorter-term debt instruments (i.e., the spread is negative).

Fund Summary

Quadratic Deflation ETF

When the Fund purchases an option, the Fund pays a cost (premium) to purchase the option. The Fund's investments in options will be traded in the over-the counter ("OTC") market. OTC derivative instruments generally have more flexible terms negotiated between the buyer and the seller. These instruments would generally be subject to greater counterparty risk. Many of the protections afforded to exchange participants will not be available for OTC options and there is no daily price fluctuation limits. OTC instruments also may be subject to greater liquidity risk. Under the Fund's option contracts, the Fund pays upfront for the option contracts (i.e., the premium), and counterparties are not required to post variation margin. There is no potential additional cash outflow or future liability for the Fund under the options; the Fund's only potential loss on such options is the premium paid in advance. However, the Fund's options contracts are subject to counterparty risk, which is the risk of non-performance by an options counterparty. Such non-performance could result in a material loss to the Fund. The Fund is also subject to significant counterparty risk as a result of holding cash at the Fund's custodian because such cash deposits are unsecured liabilities of the custodian.

Options contracts, by their terms, have stated expirations; therefore, to maintain consistent exposure to options, the Fund will periodically migrate out of existing positions and into different positions with different strike prices and maturities — a process referred to as "rolling." Quadratic will use its discretion to implement option strategies with a time-to-expiration of any maturity.

Under normal circumstances, the Sub-Adviser generally expects to invest less than 20% of the Fund's assets in option premiums (as defined below) and to actively manage the Fund's options investments to reduce the weight of such options in the Fund's portfolio if their value increases above the desired amount. Similarly, the Sub-Adviser generally expects to sell portfolio investments and reinvest proceeds in options if the value of such options declines below the desired amount.

Investments in derivative instruments, such as the options used in the options strategies, have the economic effect of creating financial leverage in the Fund's portfolio because such investments may give rise to gains or losses that are disproportionate to the amount the Fund has invested in those instruments. Because the Fund only invests option strategies structured to limit the potential loss to the Fund as part of its principal investment strategy, the maximum loss for the Fund's options position is the "options premium," which is defined as the net premium paid for the options and any post-purchase appreciation in value. Thus, any disproportionate returns are generally expected to exist only when the value of such options appreciates. However, following such appreciation, even small changes in the shape of the U.S. interest rate curve or interest rate volatility may result in a significant decline in the value of such options with a maximum loss equal to the options premium at risk. Even small changes in the shape of the U.S. interest rate curve or changes to interest rate volatility levels may result in a significant decline in the value of such options. While the options strategies used by the Fund are structured to limit the potential loss to the Fund, there is no guarantee that this will occur.

The Fund is non-diversified and therefore may invest a larger percentage of its assets in the securities of a single issuer or smaller number of issuers than diversified funds.

Principal Risks

As with all exchange traded funds ("ETFs"), a shareholder of the Fund is subject to the risk that his or her investment could lose money. The Fund may not achieve its investment objective and an investment in the Fund is not by itself a complete or balanced investment program. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit

Fund Summary

Quadratic Deflation ETF

Insurance Corporation or any other government agency. An investment in the Fund involves the risk of total loss. In addition to these risks, the Fund is subject to a number of additional principal risks that may affect the value of its shares, including:

Derivatives Risk. The use of derivatives may involve leverage, which includes risks that are different from, and greater than, the risks associated with investing directly in a reference asset, because a small investment in a derivative can result in a large impact on the Fund and may cause the Fund to be more volatile. Derivatives may at times be highly illiquid, and the Fund may not be able to close out or sell a derivative at a particular time or at an anticipated price. Derivatives can be difficult to value and valuation may be more difficult in times of market turmoil. There may be imperfect correlation between the derivative and that of the reference asset, resulting in unexpected returns that could materially adversely affect the Fund. Certain derivatives (such as swaps and options) are bi-lateral agreements that expose the Fund to counterparty risk, which is the risk of loss in the event that the counterparty to an agreement fails to make required payments or otherwise comply with the terms of derivative. In that case, the Fund may suffer losses potentially equal to, or greater than, the full value of the derivative if the counterparty fails to perform its obligations. That risk is generally thought to be greater with over-the-counter (OTC) derivatives than with derivatives that are exchange traded or centrally cleared. Counterparty risks are compounded by the fact that there are only a limited number of ways available to invest in certain reference assets and, therefore, there may be few counterparties to swaps or options based on those reference assets. Many derivatives are subject to segregation requirements that require the Fund to segregate the market or notional value of the derivatives, which could impede the portfolio management of the Fund.

The derivative instruments and techniques that the Fund may principally use include:

- **Option Strategies Risk.** If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or swap on the underlying instrument at an agreed-upon price typically in exchange for a premium paid by the Fund. In general, most options on interest rate swaps are “European-style” options, which means that they can only be exercised at the end of the option term. A decision as to whether, when and how to use options involves the exercise of skill and judgment and even a well-conceived option transaction may be unsuccessful because of market behavior or unexpected events. The prices of options can be highly volatile and the use of options can lower total returns.

The options strategies used by the Fund may involve writing covered options and are structured as long call spreads, long put spreads or long butterflies. If there is a broad market move, the strategies may not have the same return as a strategy composed of only long options. The Fund will pay a premium for its options strategies and they are structured to limit the potential loss to the Fund to the market value of the options strategy; however, there is no guarantee that this will occur. If an option that the Fund has purchased is never exercised or closed out, the Fund will lose the amount of the premium it paid and the use of those funds.

OTC options generally have more flexible terms negotiated between the buyer and the seller, but the counterparties may be required to post “variation margin” as frequently as daily to reflect any gains or losses in such options contracts. Where, as here, such variation margin is not required to be posted, such instruments are generally subject to greater credit risk and counterparty risk, which is the risk that the other party to the derivative will fail to make required

Fund Summary

Quadratic Deflation ETF

payments or otherwise comply with the terms of the option. Counterparty risk may arise because of market activities and developments, the counterparty's financial condition (including financial difficulties, bankruptcy, or insolvency), or other reasons. OTC instruments also may be subject to greater liquidity risk.

Hedging Risk. The Fund seeks to mitigate (or hedge) the risk associated with the potential impact of a flattening or inverting U.S. interest rate curve ("curve risk"), deflation and deflationary expectations, on the performance of U.S. government bonds. The Fund does not seek to mitigate credit risk, non-curve interest rate risk, or other factors influencing the price of U.S. government bonds, which factors may have a greater impact on the bonds' returns than the U.S. interest rate curve or deflation. Further, there is no guarantee that the Fund's investments will eliminate or mitigate curve risk, deflation risk on long positions in U.S. government bonds. **If interest rates increase in parallel within the U.S. interest rate curve, the Fund will not be hedged.** In addition, when the U.S. interest rate curve steepens, the Fund's investments in options may lose value or end up worthless. Under such circumstances, the Fund will generally underperform a portfolio comprised solely of U.S. government bonds (without the options owned by the Fund). **In a steepening curve environment, the Fund's hedging strategy could result in disproportionately larger losses in the Fund's options as compared to gains or losses in its U.S. government bond positions attributable to interest rate changes.** There is no guarantee that the Fund will have positive returns, even in environments of sharply declining inflation rates. The Fund will incur expenses when entering into positions in rate-linked options. Moreover, to the extent that curve risk has been priced into the U.S. government bonds owned by the Fund, the Fund will underperform other investments even during periods of curve flattening.

Rate-Linked Derivatives Investment Risk. The Fund's exposure to derivatives tied to interest rates subjects the Fund to greater volatility than investments in traditional securities, such as stocks and bonds. **Investing in derivatives tied to interest rates, including through options tied to the shape of the U.S. interest rate curve, can be extremely volatile.** The value of such investments may fluctuate rapidly based on a variety of factors, including overall market movements; economic events and policies; changes in interest rates or inflation rates; changes in monetary and exchange control programs; war; acts of terrorism; natural disasters; and technological developments. The Fund is expected to benefit from the options it holds if the U.S. interest rate curve flattens or inverts during the time period in which the Fund holds the options. However, if the U.S. interest rate curve steepens, the Fund will lose money on the options, up to the amount invested in option premiums, and underperform an otherwise identical bond fund that had not used such options. Rate-linked derivatives may lose money if interest rates change in a manner not anticipated by the Sub-Adviser.

A increase in interest rates may cause the value of securities held directly or indirectly by the Fund to decline to the extent that the increase is not linked to a flattening or inverting of the U.S. interest rate curve or the Fund's hedging strategy is not effectively implemented. Even if the Fund is hedged against losses due to interest rate increase linked to U.S. interest rate curve flattening or inverting, outright interest rate increases may lead to heightened volatility in the fixed-income markets and may positively affect the value of the Fund's options while negatively impacting the Fund's investments in Treasuries.

There can be no assurance that the Fund's interest-rate linked options will accurately deliver positive returns if deflation experienced in the United States or the rate of expected future inflation reflected in the prices and yields of bonds held by the Fund declines. The Fund could lose money on the options held by the Fund, and the present value of the Fund's portfolio investments could decrease

Fund Summary

Quadratic Deflation ETF

if deflation occurs. These interest rate-linked options may also cause the Fund's net asset value and returns to be more volatile and expose the Fund to increased counterparty risk. Fluctuations in the steepness of the U.S. interest rate curve or the price of the options owned by the Fund could materially adversely affect an investment in the Fund.

The Fund's investments in options are not intended to mitigate duration and credit risk or other factors influencing the price of U.S. government bonds, which may have a greater impact on the bonds' returns than curve risk. Moreover, to the extent that curve risk has been priced into the government bonds owned directly or indirectly by the Fund, the Fund could underperform other investments even during deflationary periods. There is no guarantee that the Fund will have positive performance even in environments of sharply declining inflation. There is no guarantee that the Fund will be able to successfully mitigate deflation risk or that bond values and interest rates will match changes in inflation rates.

Fixed Income Securities Risk. Investing in fixed income securities subjects the Fund to the following risks:

Credit Risk. Credit risk refers to the possibility that the issuer of a security will not be able to make payments of interest and principal when due. Changes in an issuer's credit rating or the market's perception of an issuer's creditworthiness may also affect the value of an investment in that issuer.

Event Risk. Event risk is the risk that an unexpected event could interfere with an issuer's ability to make timely interest or principal payments or that causes market speculation about the issuer's ability to make such payments, which could cause the credit quality and market value of an issuer's bonds and/or other debt securities to decline significantly.

Interest Rate Risk. Generally, the value of fixed income securities will change inversely with changes in interest rates. As interest rates rise, the market value of fixed income securities tends to decrease. Conversely, as interest rates fall, the market value of fixed income securities tends to increase. This risk will be greater for long-term securities than for short-term securities. The current low interest rate environment increases the risks associated with rising interest rates.

Maturity Risk. The value of the Fund's fixed income investments is also dependent on their maturity. Generally, the longer the maturity of a fixed income security, the greater its sensitivity to changes in interest rates.

U.S. Government Obligations Risk. Obligations of U.S. Government agencies and authorities receive varying levels of support and may not be backed by the full faith and credit of the U.S. Government, which could affect the Fund's ability to recover should they default. No assurance can be given that the U.S. Government will provide financial support to its agencies and authorities if it is not obligated by law to do so. Additionally, market prices and yields of securities supported by the full faith and credit of the U.S. government or other countries may decline or be negative for short or long periods of time.

Returns of Capital Distributions From the Fund Reduce the Tax Basis of Fund Shares. A portion of the Fund's distributions may be treated as a return of capital for tax purposes. Return of capital distributions are not taxable income to you but reduce your tax basis in your shares of the Fund. Such a reduction in tax basis will result in larger taxable gains and/or lower tax losses on a subsequent sale of shares of the Fund.

Fund Summary

Quadratic Deflation ETF

LIBOR Transition Risk. The United Kingdom's Financial Conduct Authority announced a phase out of the London Interbank Offered Rate ("LIBOR"). Although many LIBOR rates will be phased out by the end of 2021, a selection of widely used USD LIBOR rates will continue to be published through June 2023 in order to assist with the transition. The Funds may be exposed to financial instruments tied to LIBOR to determine payment obligations, financing terms, hedging strategies or investment value. The transition process away from LIBOR might lead to increased volatility and illiquidity in markets for, and reduce the effectiveness of new hedges placed against, instruments whose terms currently include LIBOR. The ultimate effect of the LIBOR transition process on the Funds is uncertain.

Non-Diversified Fund Risk. Because the Fund is non-diversified and may invest a greater portion of its assets in fewer issuers than a diversified fund, changes in the market value of a single portfolio holding could cause greater fluctuations in the Fund's share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a single portfolio holding or a relatively small number of portfolio holdings to have a greater impact on the Fund's performance.

ETF Risk. As an ETF, the Fund is subject to the following risks:

Authorized Participants Concentration Risk. The Fund has a limited number of financial institutions that may act as Authorized Participants. To the extent they exit the business or are otherwise unable to proceed in creation and redemption transactions with the Fund and no other Authorized Participant is able to step forward to create or redeem, shares of the Fund may be more likely to trade at a premium or discount to net asset value ("NAV") and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for exchange-traded funds ("ETFs"), such as the Fund, that invest in securities issued by non-U.S. issuers or other securities or instruments that have lower trading volumes.

New Fund Risk. If the Fund does not grow in size, it will be at greater risk than larger funds of wider bid-ask spreads for its shares, trading at a greater premium or discount to NAV, liquidation and/or a stop to trading.

Premium/Discount Risk. There may be times when the market price of the Fund's shares is more than the NAV intra-day (at a premium) or less than the NAV intra-day (at a discount). As a result, shareholders of the Fund may pay more than NAV when purchasing shares and receive less than NAV when selling Fund shares. This risk is heightened in times of market volatility or periods of steep market declines. In such market conditions, market or stop loss orders to sell Fund shares may be executed at prices well below NAV.

Secondary Market Trading Risk. Investors buying or selling shares in the secondary market will normally pay brokerage commissions, which are often a fixed amount and may be a significant proportional cost for investors buying or selling relatively small amounts of shares. Secondary market trading is subject to bid-ask spreads and trading in Fund shares may be halted by the Exchange because of market conditions or other reasons. If a trading halt occurs, a shareholder may temporarily be unable to purchase or sell shares of the Fund. In addition, although the Fund's shares are listed on the Exchange, there can be no assurance that an active trading market for shares will develop or be maintained or that the Fund's shares will continue to be listed.

Liquidity Risk. The Fund's investments are subject to liquidity risk, which exists when an investment is or becomes difficult or impossible to purchase or sell at a advantageous time and price. Liquidity risk may be the result of, among other things, market turmoil, the reduced number and capacity of traditional market participants, or the lack of an active trading market. Markets for securities or

Fund Summary

Quadratic Deflation ETF

financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, new legislation or regulatory changes inside or outside the U.S. Liquid investments may become less liquid after being purchased by the Fund, particularly during periods of market stress. In addition, if a transaction is particularly large or if the relevant market is or becomes illiquid, it may not be possible to initiate a transaction or liquidate a position, which may cause the Fund to suffer significant losses and difficulties in meeting redemptions. If a number of securities held by the Fund stop trading, it may have a cascading effect and cause the Fund to halt trading. Volatility in market prices will increase the risk of the Fund being subject to a trading halt.

Management Risk. The Fund is actively-managed and may not meet its investment objective based on the Sub-Adviser's success or failure to implement investment strategies for the Fund. The Sub-Adviser's evaluations and assumptions regarding investments, interest rates, inflation, and other factors may not successfully achieve the Fund's investment objective given actual market conditions.

Market Risk. The values of the Fund's holdings could decline generally or could underperform other investments. In addition, there is a risk that policy changes by the U.S. Government, Federal Reserve, and/or other government actors could cause volatility in global financial markets and negative sentiment, which could have a negative impact on the Fund and could result in losses. Geopolitical and other risks, including environmental and public health risks may add to instability in world economies and markets generally. Changes in value may be temporary or may last for extended periods. Further, the Fund is susceptible to the risk that certain investments may be difficult or impossible to sell at a favorable time or price. Market developments may also cause the Fund's investments to become less liquid and subject to erratic price movements.

Valuation Risk. Independent market quotations for certain investments held by the Fund may not be readily available, and such investments may be fair valued or valued by a pricing service at an evaluated price. These valuations involve subjectivity and different market participants may assign different prices to the same investment. As a result, there is a risk that the Fund may not be able to sell an investment at the price assigned to the investment by the Fund.

High Portfolio Turnover Risk. The Fund may incur high portfolio turnover rates, which may increase the Fund's brokerage commission costs and negatively impact the Fund's performance. Such portfolio turnover also may generate net short-term capital gains.

Investment in Investment Companies Risk. When the Fund invests in other investment companies (or funds), it will indirectly be exposed to the risks of such funds' investments. Moreover, the Fund will incur its pro rata share of such funds' expenses. Additionally, investments in ETFs are subject to ETF Risk.

Tax Risk. To qualify for the favorable U.S. federal income tax treatment accorded to a regulated investment company ("RIC") under the Internal Revenue Code of 1986, as amended (the "Code"), the Fund must satisfy certain income, asset diversification and distribution requirements each year. Among other requirements, the Fund must derive at least 90% of its gross income each taxable year from certain qualifying sources of income and the Fund's assets must be diversified so that at least 50% of the value of the Fund's total assets is represented by cash and cash items, U.S. government securities, securities of other RICs, and other securities, subject to certain other limitations (see the "Taxes" section in the SAI for additional information). The Fund's investments in certain rate-linked derivative instruments (such as rate-linked options) may generate income that is not qualifying income and such investments may not be treated as investments in "securities" for purposes of

Fund Summary

Quadratic Deflation ETF

the asset diversification requirement. The Fund will also need to manage its exposure to derivatives counterparties for purposes of satisfying the diversification test. If the Fund were to fail to meet the qualifying income test or asset diversification test and fail to qualify as a RIC, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income, which would adversely affect the Fund's performance. The failure by the Fund to qualify as a RIC would have significant negative tax consequences to Fund shareholders and would significantly and adversely affect a shareholder's return on its investment in the Fund. Under certain circumstances, the Fund may be able to cure a failure to meet the qualifying income test or asset diversification test if such failure was due to reasonable cause and not willful neglect, but to do so the Fund may incur significant fund-level taxes, which would effectively reduce (and could eliminate) the Fund's returns.

Cash and Cash Equivalents Risk. The Fund may hold cash or cash equivalents. Generally, such positions offer less potential for gain than other investments. Holding cash or cash equivalents, even strategically, may lead to missed investment opportunities. This is particularly true when the market for other investments in which the Fund may invest is rapidly rising. If the Fund holds cash uninvested it will be subject to the credit risk of the depositing institution holding the cash.

Performance Information

Once the Fund has completed a full calendar year of operations, a bar chart and table will be included in this Prospectus that will provide some indication of the risks of investing in the Fund by showing the variability of the Fund's return based on net assets and comparing the variability of the Fund's return to a broad measure of market performance. Once available, the Fund's current performance information will be available at www.bnddetf.com. Past performance does not necessarily indicate how the Fund will perform in the future.

Management

Investment Adviser and Sub-Adviser

Krane Funds Advisors, LLC ("Krane" or "Adviser"), a UN PRI signatory, serves as the investment adviser to the Fund.

Quadratic Capital Management LLC ("Quadratic" or "Sub-Adviser"), a registered Small/Minority Business Enterprise and a majority woman-owned firm, which is a member of the SASB Alliance and supports the elevation of financially material ESG standards, serves as the investment sub-adviser to the Fund.

Portfolio Manager

Nancy Davis, Managing Partner and Chief Investment Officer of Quadratic, has been primarily responsible for the day-to-day management of the Fund's portfolio since the Fund's inception.

Purchase and Sale of Fund Shares

Shares may be purchased and redeemed from the Fund only in "Creation Units" of 25,000 shares, or multiples thereof. As a practical matter, only institutions and large investors, such as market makers or other large broker-dealers, purchase or redeem Creation Units. Most investors will buy and sell shares of the Fund on the Exchange. Individual shares can be bought and sold throughout the trading day like other publicly traded securities through a broker-dealer on the Exchange. These transactions do not involve the Fund. The price of an individual Fund share is based on market prices, which may

Fund Summary

Quadratic Deflation ETF

be different from its NAV. As a result, the Fund's shares may trade at a price greater than the NAV (at a premium) or less than the NAV (at a discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the "bid-ask spread"). Most investors will incur customary brokerage commissions and charges when buying or selling shares of the Fund through a broker-dealer.

Recent information regarding the Fund, including its NAV, market price, premiums and discounts, and bid ask spreads, will be available on the Fund's website at www.bndddef.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged retirement account, which may be taxable upon withdrawal.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase Fund shares through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your sales person to recommend the Fund over another investment. Ask your sales person or visit your financial intermediary's website for more information.

Additional Information About the Fund

Each of the policies described in this Prospectus, including the Fund's investment objective, is a non-fundamental policy that may be changed by the Board of Trustees of the Trust without shareholder approval. Certain fundamental policies of the Fund are set forth in the SAI.

Principal Investment Strategy

The Fund primarily invests, directly or indirectly, in Treasuries of any maturity. The Fund also invests in option strategies tied to the shape of the U.S. interest rate swap curve, which reflects the difference between swap rates applicable to debt instruments with different maturities. Interest rate swaps are derivative instruments used by two parties to "swap" interest rate exposures typically from a fixed-rate to a floating-rate or vice versa. For example, a party receiving interest based on a floating interest rate may seek to "swap" such interest payments for payments based on a fixed interest rate (known as the "swap rate"). A graph showing the swap rates for a given instrument with varying maturities would depict the swap curve for such an instrument. The option strategies used by the Fund are expected to increase in value when the U.S. interest rate swap curve flattens or inverts and decrease in value (or become worthless) when the U.S. interest rate swap curve steepens.

The Sub-Adviser utilizes a proprietary investment process to assemble an investment portfolio for the Fund that is designed to generate positive returns from the Fund's option strategies during periods when the U.S. interest rate swap curve flattens or inverts, while also seeking to protect against the effects of deflation. The Fund's option strategies are not intended to mitigate other factors influencing the price of government bonds, such as credit and interest rate risk, which may have a greater impact on the bonds' returns together with rising or falling interest rates. Relative to a long-only investment in the same government bonds, the Fund's investment strategy is designed to outperform in a flattening or inverted U.S. interest rate curve environment and underperform when the curve is becoming steeper. Performance of the Fund could be particularly poor in risk-on, market rallying environments when it is common for government bonds to decline in value and for interest rates to rise and the U.S. interest rate curve to steepen. In addition, the performance of the Fund depends on many factors beyond rising or falling U.S. interest rate curve levels, such as the perceived level of credit risk in the government bond positions and changes in interest rates that are not correlated with deflation and curve levels. These factors may be as or more important to the performance of the Fund than the impact of U.S. interest rate curve changes and deflation. As such, there is no guarantee that the Fund will have positive performance even in environments of sharply declining inflation rates in which the hedging positions would be expected to mitigate the effect of such decline. The Fund is likely to be significantly more volatile than a fund holding only long positions in the same U.S. government bonds as the Fund because the hedging component of the Fund could result in significant gains for the Fund or in a complete loss of the premiums paid for the Fund's option strategies.

The Sub-Adviser periodically rebalances the Fund's portfolio to maintain the desired exposure. Occasionally, market conditions and/or large Fund cash flows may require more frequent adjustment of the exposures. During the rebalancing process, the Sub-Adviser may identify securities and other instruments in the portfolio that no longer meet the principal investment strategies of the Fund and may sell such securities or other instruments to better align the portfolio with the Fund's principal investment strategies.

Environmental, Social and Governance ("ESG") Issues. The Fund's investments are generally expected to adhere to ESG principles by excluding issuers involved in, and/or which derive significant revenue from, certain practices, industries or product lines. Among others, these include: Extreme Event Controversies, Controversial Weapons, UN Global Compact Violations, Civilian Firearms, Thermal Coal

Additional Information About the Fund

Extraction and Tobacco. The ESG principles used by the Fund are based on the framework published by the Sustainability Accounting Standards Board (“SASB”), which attempts to identify ESG issues that are financially material to an issuer based on its industry classification. Further, the Fund represents an ESG “impact” investment insofar as Quadratic is a registered Small/Minority Business Enterprise and a majority woman-owned firm and, thus, an investment in the Fund advances certain ESG governance principles (such as increasing the representation of women in senior management and board positions in the U.S.).

Temporary Defensive Positions. From time to time, the Fund may take temporary defensive positions that are inconsistent with its principal investment strategies in attempting to respond to poor market liquidity, adverse markets, economic, political, or other conditions. In such instances, the Fund may hold up to 100% of its assets in cash; short-term U.S. government securities and government agency securities; investment grade money market instruments; money market mutual funds; investment grade fixed-income securities; repurchase agreements; commercial paper; cash equivalents; and ETFs that principally invest in the foregoing instruments. However, the Sub-Adviser will not seek to actively time market movements. As a result of engaging in these temporary measures, the Fund may not achieve its investment objective.

Principal Investment Risks

The following section provides additional information regarding certain of the principal risks of investing in the Fund. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. An investment in the Fund involves a risk of a total loss. There is no guarantee that the Fund will meet its investment objective.

Derivatives Risk. Derivatives are financial instruments whose values are based on the value of one or more reference assets, such as a security, asset, currency, interest rate or index. Derivatives involve risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments. For example, derivatives involve the risk of mispricing or improper valuation and the risk that changes in the value of a derivative may not correlate perfectly with the reference asset(s). Derivative transactions can create investment leverage, may be highly volatile and the Fund could lose more than the amount it invests. Many derivative transactions are entered into “over-the-counter” (not on an exchange or contract market); as a result, the value of such a derivative transaction will depend on the ability and the willingness of the Fund’s counterparty to perform its obligations under the transaction. If a counterparty were to default on its obligations, the Fund’s contractual remedies against such counterparty may be subject to bankruptcy and insolvency laws, which could affect the Fund’s rights as a creditor (e.g., the Fund may not receive the net amount of payments that it is contractually entitled to receive). A liquid secondary market may not always exist for the Fund’s derivative positions at any time. If a derivative transaction is centrally cleared, it will be subject to the rules of the clearing exchange and subject to risks associated with the exchange. Derivatives can be illiquid and imperfectly correlate with the reference asset(s). Many derivatives are subject to segregation requirements, pursuant to which the Fund must segregate the market or notional value of the derivatives and which could impede the portfolio management of the Fund. It is possible that developments in the derivatives market, including ongoing or potential government regulation, could adversely affect the Fund’s ability to enter into new derivatives agreements, terminate existing derivative agreements or to realize amounts to be received under such instruments.

Additional Information About the Fund

Counterparty Risk. Because many derivatives are an obligation of the counterparty rather than a direct investment in the reference asset, the Fund may suffer losses potentially equal to, or greater than, the full value of the derivative if the counterparty fails to perform its obligations under the derivative agreement as a result of bankruptcy or otherwise. Any loss would result in a reduction in the NAV of the Fund and will likely impair the Fund's ability to achieve its investment objective. If there are only a few potential counterparties, the Fund, subject to applicable law, may enter into swap or options transactions with as few as one counterparty at any time.

Interest Rate Risk. The Fund's exposure to derivatives tied to interest rates subjects the Fund to greater volatility than investments in traditional securities, such as stocks and bonds. **Investing in derivatives tied to interest rates, including through interest rate-linked derivative instruments, such as rate-linked swaps and options, can be extremely volatile.** The value of such investments may fluctuate rapidly based on a variety of factors, including overall market movements; economic events and policies; changes in interest rates or inflation rates; changes in monetary and exchange control programs; war; acts of terrorism; natural disasters; and technological developments. These factors may affect the value of the Fund in varying ways, and different factors may cause the value and the volatility of the Fund to move in inconsistent directions at inconsistent rates.

As interest rates rise, the value of a fixed-income security held directly or indirectly by the Fund, such as Treasuries, is likely to decrease. Securities with longer durations tend to be more sensitive to interest rate changes, usually making their prices more volatile than those of securities with shorter durations. To the extent the Fund invests a substantial portion of its assets directly or indirectly in fixed-income securities with long-term maturities, rising interest rates may cause the value of the Fund's investments to decline significantly, which may adversely affect the value of the Fund. To the extent such rising rates are linked to the flattening of the U.S. interest rate curve, the options used by the Fund are designed to offset such decreases in value. However, even if the hedging strategy of the Fund performs as intended, an increase in interest rates may lead to heightened volatility in the fixed-income markets and adversely affect the liquidity of certain fixed-income investments. In addition, decreases in fixed-income dealer market making capacity may also potentially lead to heightened volatility and reduced liquidity in the fixed-income markets. The Fund seeks to mitigate the risk of rising interest rates, to the extent that increases are tied to curve flattening or inverting, by using options; such positions should increase in value in flattening or inverted curve environments and should decrease in value in steepening curve environments, thereby mitigating potential gains and losses in the government bond positions of the Fund arising from changes in the level of the interest rate curve. The Fund does not attempt to mitigate credit risk, interest rate risk generally, or other factors, which may have a greater influence on government bonds' returns than curve risk. Because the Fund's hedge is rolled on a periodic basis, the risk can develop intra-period. Furthermore, while the Fund is designed to hedge the curve level risk exposure of the long government bond positions, it is possible that a degree of exposure may remain even at the time of rebalance.

Leveraging Risk. The Fund's investment in derivative instruments provide leveraged exposure. The Fund's investment in these instruments generally requires a small investment relative to the amount of investment exposure assumed. As a result, such investments may give rise to losses that exceed the amount invested in those instruments. The use of derivatives may expose the Fund to potentially dramatic losses (or gains) in the value of a derivative or other financial instrument and, thus, in the value the Fund's portfolio.

Additional Information About the Fund

Option Strategies Risk. If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or swap on the underlying instrument at an agreed-upon price typically in exchange for a premium paid by the Fund. In general, most options on interest rate swaps are “European” exercise, which means that they can only be exercised at the end of the option term. A decision as to whether, when and how to use options involves the exercise of skill and judgment and even a well-conceived option transaction may be unsuccessful because of market behavior or unexpected events. The prices of options can be highly volatile and the use of options can lower total returns.

The options strategies used by the Fund may involve writing covered options and are structured as long call spreads, long put spreads or long butterflies. If there is a broad market move, the strategies may not have the same return as a strategy composed of only long options. The Fund will pay a premium for its options strategies and they are structured to limit the potential loss to the Fund to the market value of the options strategy; however, there is no guarantee that this will occur. If an option that the Fund has purchased is never exercised or closed out, the Fund will lose the amount of the premium it paid and the use of those funds.

OTC options generally have more flexible terms negotiated between the buyer and the seller, and the counterparties may be required to post “variation margin” daily to reflect any gains or losses in such options contracts. If such variation margin is not required to be posted, such instruments would generally be subject to greater credit risk and counterparty risk. OTC instruments also may be subject to greater liquidity risk.

ETF Risk. As an ETF, the Fund is subject to the following risks:

Authorized Participants Concentration Risk. The Fund has a limited number of financial institutions that may act as Authorized Participants. To the extent they exit the business or are otherwise unable to proceed in creation and redemption transactions with the Fund and no other Authorized Participant is able to step forward to create or redeem, shares of the Fund may be more likely to trade at a premium or discount to net asset value (“NAV”) and possible face trading halts or delisting. Authorized Participant concentration risk may be heightened for exchange-traded funds (“ETFs”), such as the Fund, that invest in securities issued by non-U.S. issuers or other securities or instruments that have lower trading volumes.

New Fund Risk. If the Fund does not grow in size, it will be at greater risk than larger funds of wider bid-ask spreads for its shares, trading at a greater premium or discount to NAV, liquidation and/or a stop to trading.

Premium/Discount Risk. The NAV of the Fund’s shares will generally fluctuate with changes in the market value of the Fund’s securities holdings. The market prices of Fund shares will generally fluctuate in accordance with changes in the Fund’s NAV and supply and demand of shares on the secondary market. It cannot be predicted whether Fund shares will trade below, at or above their NAV. As a result, shareholders of the Fund may pay more than NAV when purchasing shares and receive less than NAV when selling Fund shares. This risk is heightened in times of market volatility or periods of steep market declines. In such market conditions, market or stop-loss orders to sell the ETF shares may be executed at market prices that are significantly below NAV. The market prices of Fund shares may deviate significantly from the NAV of the shares during periods of market volatility or if the Fund’s holdings are or become more illiquid. Disruptions to creations and redemptions may result in trading prices that differ significantly from the Fund’s NAV. In addition, market prices of Fund shares may deviate significantly from the NAV if the number of Fund shares outstanding is smaller or if there is

Additional Information About the Fund

less active trading in Fund shares. Investors purchasing and selling Fund shares in the secondary market may not experience investment results consistent with those experienced by those creating and redeeming directly with the Fund.

Secondary Market Trading Risk. Investors buying or selling shares in the secondary market will normally pay brokerage commissions, which are often a fixed amount and may be a significant proportional cost for investors buying or selling relatively small amounts of shares. In addition, secondary market investors will incur the cost of the difference between the price that an investor is willing to pay for shares (the bid price) and the price at which an investor is willing to sell shares (the ask price). This difference in bid and ask prices is often referred to as the “spread” or “bid/ask spread.” The bid/ask spread, which increases the cost of purchasing and selling Fund shares, varies over time for shares based on trading volume and market liquidity, and is generally lower if the Fund’s shares have more trading volume and market liquidity and higher if the Fund’s shares have little trading volume and market liquidity. Increased market volatility may cause increased bid/ask spreads.

Although Fund shares are listed for trading on the Exchange, there can be no assurance that an active trading market for such shares will develop or be maintained or that the Fund’s shares will continue to be listed. Trading in Fund shares may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares inadvisable. In addition, trading in shares is subject to trading halts caused by extraordinary market volatility pursuant to Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of any Fund will continue to be met or will remain unchanged or that the shares will trade with any volume, or at all.

Cash Transactions Risk. Like other ETFs, the Fund sells and redeems its shares only in large blocks called Creation Units and only to Authorized Participants. Unlike most other ETFs, however, the Fund expects to effect its creations and redemptions at least partially or fully for cash, rather than in-kind securities.

Other ETFs generally are able to make in-kind redemptions and avoid realizing gains in connection with redemption requests. Effecting redemptions for cash may cause the Fund to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. Such dispositions may occur at an inopportune time, resulting in potential losses to the Fund or difficulties in meeting shareholder redemptions, and involve transaction costs. If the Fund recognizes gain on these sales, this generally will cause the Fund to recognize gain it might not otherwise have recognized if it were to distribute portfolio securities in-kind or to recognize such gain sooner than would otherwise have been required. The Fund generally intends to distribute these gains to shareholders to avoid being taxed on this gain at the Fund level and otherwise comply with the special tax rules that apply to it. This strategy may cause shareholders to be subject to tax on gains they would not otherwise be subject to, or at an earlier date than, if they had made an investment in another ETF.

In addition, cash transactions may have to be carried out over several days if the securities market in which the Fund is trading is less liquid and may involve considerable transaction expenses and taxes. These brokerage fees and taxes, which will be higher than if the Fund sold and redeemed its shares principally in-kind, may be passed on to purchasers and redeemers of Creation Units in the form of creation and redemption transaction fees. However, the Fund has capped the total fees that may be charged in connection with the redemption of Creation Units at 2% of the value of the Creation Units redeemed. To the extent transaction and other costs associated with a redemption

Additional Information About the Fund

exceed that cap, those transaction costs will be borne by the Fund's remaining shareholders. These factors may result in wider spreads between the bid and the offered prices of the Fund's shares than for other ETFs.

Fixed Income Securities Risk. The value of the Fund's investments in fixed income securities will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned indirectly by the Fund. On the other hand, if rates fall, the value of the fixed income securities generally increases. The Fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. Below are several specific risks associated with investments in fixed income securities.

Credit Risk. Credit risk refers to the possibility that the issuer of a security will not be able to make payments of interest and principal when due. Changes in an issuer's credit rating or the market's perception of an issuer's creditworthiness may also affect the value of an investment in that issuer. The degree of credit risk depends on both the financial condition of the issuer and the terms of the obligation.

Event Risk. Event risk is the risk that an unexpected event could interfere with an issuer's ability to make timely interest or principal payments or that causes market speculation about the issuer's ability to make such payments. As a result, the credit quality and market value of an issuer's bonds and/or other debt securities may decline significantly.

Interest Rate Risk. Generally, the value of fixed income securities will change inversely with changes in interest rates. As interest rates rise, the market value of fixed income securities tends to decrease. Conversely, as interest rates fall, the market value of fixed income securities tends to increase. This risk will be greater for long-term securities than for short-term securities. The Fund may take steps to attempt to reduce the exposure of its portfolio to interest rate changes; however, there can be no guarantee that the Fund will take such actions or that the Fund will be successful in reducing the impact of interest rate changes on the portfolio. Changes in government intervention may have adverse effects on investments, volatility, and illiquidity in debt markets.

Maturity Risk. The value of the Fund's fixed income investments is also dependent on their maturity. Generally, the longer the maturity of a fixed income security, the greater its sensitivity to changes in interest rates.

Hedging Risk. When a derivative is used as a hedge against a position that the Fund holds, any loss generated by the derivative generally could be offset by gains on the hedged investment, and vice versa. While hedging can reduce or eliminate losses, it can also reduce or eliminate gains. Hedges are sometimes subject to mismatch between the derivative and the underlying security, and there can be no assurance that the Fund's hedging transactions, which entail additional transaction costs, will be effective. The Fund seeks to mitigate (or hedge) the risk associated with the potential impact of a flattening or inverting U.S. interest rate curve ("curve risk"), decline in inflation and inflation expectations, on the performance of U.S. government bonds. The Fund does not seek to mitigate credit risk, non-curve interest rate risk, or other factors influencing the price of U.S. government bonds, which factors may have a greater impact on the bonds' returns than the U.S. interest rate curve or inflation. Further, there is no guarantee that the Fund's investments will eliminate or mitigate curve risk, inflation risk on long positions in U.S. government bonds. **If interest rates increase in parallel within the U.S. interest rate curve, the Fund will not be hedged.** In addition, when the U.S. interest rate curve steepens, the Fund's investments in options may lose value or end up worthless.

Additional Information About the Fund

Under such circumstances, the Fund will generally underperform a portfolio comprised solely of U.S. government bonds (without the options owned by the Fund). **In a steepening curve environment, the Fund's hedging strategy could result in disproportionately larger losses in the Fund's options as compared to gains or losses in its U.S. government bond positions attributable to interest rate changes.** There is no guarantee that the Fund will have positive returns, even in environments of sharply declining inflation rates. The Fund will incur expenses when entering into positions in rate-linked options. Moreover, to the extent that curve risk has been priced into the U.S. government bonds owned by the Fund, the Fund will underperform other investments even during periods of curve flattening.

High Portfolio Turnover Risk. The Fund may incur high portfolio turnover rates. This may increase the Fund's brokerage commission costs. The performance of the Fund could be negatively impacted by the increased brokerage commission costs incurred by the Fund. Rapid portfolio turnover also exposes shareholders to a higher current realization of short-term capital gains, distributions of which would generally be taxed to you as ordinary income and thus cause you to pay higher taxes.

Investment in Investment Companies Risk. When the Fund purchases shares of investment companies (such as ETFs, unit investment trusts, closed-end investment companies and foreign investment companies), in addition to directly bearing the expenses associated with its own operations, it will bear a pro rata portion of such funds' expenses. An investor in the Fund may receive taxable gains as a result of an underlying fund's portfolio transactions in addition to the taxable gains attributable to the Fund's transactions in shares of the underlying fund. Further, in part because of these additional expenses, the performance of an investment company may differ from the performance the Fund would achieve if it invested directly in the underlying investments of the investment company. In addition, while the risks of owning shares of an investment company generally reflect the risks of owning the underlying investments of the investment company, the Fund may be subject to additional or different risks than if the Fund had invested directly in the underlying investments. Investments in ETFs are subject to ETF Risk. For example, shares of an ETF are traded at market prices, which may vary from the NAV of its underlying investments. Also, the lack of liquidity in an ETF can contribute to the increased volatility of its value in comparison to the value of the underlying portfolio securities.

Liquidity Risk. The Fund's investments are subject to liquidity risk, which exists when an investment is or becomes difficult to purchase or sell at a reasonable price. If a transaction is particularly large or if the relevant market is or becomes illiquid, it may reduce the returns of the Fund because it may be unable to sell the illiquid securities at an advantageous time or price, which may cause the Fund to suffer significant losses and difficulties in meeting redemptions. This is especially true given the limited number of market participants in certain markets in which the Fund may invest. Market developments may cause the Fund's investments to become less liquid and subject to erratic price movements, and may also cause the Fund to encounter difficulties in timely honoring redemptions, especially if market events cause an increased incidence of shareholder redemptions. If a number of securities held by the Fund stop trading or become illiquid, it may have a cascading effect and cause the Fund to halt trading. Volatility in market prices will increase the risk of the Fund being subject to a trading halt.

LIBOR Transition Risk. The United Kingdom's Financial Conduct Authority announced a phase out of the London Interbank Offered Rate ("LIBOR"). Although many LIBOR rates will be phased out by the end of 2021, a selection of widely used USD LIBOR rates will continue to be published through June 2023 in order to assist with the transition. The Funds may be exposed to financial instruments

Additional Information About the Fund

tied to LIBOR to determine payment obligations, financing terms, hedging strategies or investment value. The transition process away from LIBOR might lead to increased volatility and illiquidity in markets for, and reduce the effectiveness of new hedges placed against, instruments whose terms currently include LIBOR. The ultimate effect of the LIBOR transition process on the Funds is uncertain.

Management Risk. The Fund is actively-managed and may not meet its investment objective based on the Sub-Adviser's success or failure to implement investment strategies for the Fund. The Sub-Adviser's evaluations and assumptions regarding investments, interest rates, inflation, and other factors may not successfully achieve the Fund's investment objective given actual market conditions.

Market Risk. The values of the Fund's holdings could decline generally or could underperform other investments. Market fluctuations could be caused by such factors as economic and political developments, changes in interest rates and perceived trends in securities prices. Recent developments in relations between the United States and its trading partners have heightened concerns of increased tariffs and restrictions on trade between the U.S. and other countries. An increase in tariffs or trade restrictions, or even the threat of such developments, could lead to a significant reduction in international trade, which could have a negative impact on the world's export industry and a commensurately negative impact on financial markets. Different types of securities tend to go through cycles of outperformance and under-performance in comparison to the general securities markets. In addition, securities may decline in value due to factors affecting a specific issuer, market or securities markets generally. Therefore, the Fund is susceptible to the risk that certain holdings may be difficult or impossible to sell at a favorable time or price. Turbulence in the financial markets and reduced liquidity in equity, credit and fixed-income markets may negatively affect issuers worldwide, which could have an adverse effect on the Fund. The Federal Reserve and other domestic and foreign government agencies may attempt to stabilize the global economy. These actions may expose markets to heightened volatility and may reduce liquidity for certain Fund investments, causing the value of the Fund's investments and share price to decline. To the extent that the Fund experiences high redemptions because of these actions, the Fund may experience increased portfolio turnover, which will increase the costs that the Fund incurs and will lower the Fund's performance.

Geopolitical risks, including terrorism, tensions or open conflict between nations, or political or economic dysfunction within some nations that are major players on the world stage or major producers of oil, may lead to overall instability in world economies and markets generally and have led, and may in the future lead, to increased market volatility and may have adverse long-term effects. Similarly, environmental and public health risks, such as natural disasters or pandemics/epidemics, or widespread fear that such events may occur, may impact markets adversely and cause market volatility in both the short- and long-term.

Certain illnesses spread rapidly and have the potential to significantly and adversely affect the global economy. Epidemics and/or pandemics have and may further result in, among other things, closing borders, enhanced health screenings, healthcare service preparation and delivery, quarantines, cancellations, disruptions to supply chains and customer activity, as well as general concern and uncertainty. The impact of such epidemics and/or pandemics that may arise in the future, have the potential to affect the economies of many nations, individual companies and the global securities and commodities markets, including liquidity, in ways that cannot necessarily be foreseen at the present time. The impact of infectious diseases in developing or emerging market countries may be greater due to less established health care systems. Health crises caused by the recent coronavirus

Additional Information About the Fund

outbreak may exacerbate other preexisting political, social and economic risks in certain countries. The impact of the outbreak may be short term or may last for an extended period of time and may have material adverse impacts on a Fund.

Non-Diversified Fund Risk. Because the Fund is non-diversified and may invest a greater portion of its assets in fewer issuers than a diversified fund, changes in the market value of a single portfolio holding could cause greater fluctuations in the Fund's share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a single portfolio holding or a relatively small number of portfolio holdings to have a greater impact on the Fund's performance.

Rate-Linked Derivatives Investment Risk. Rate-linked derivatives may lose money if short-term or long-term interest rates rise sharply or otherwise change in a manner not anticipated by the Sub-Adviser. The returns of curve-linked instruments that may be used by the Fund to hedge deflation and curve risk reflect a specified set of swap terms. There can be no assurance that such terms will accurately measure either the rate of deflation experienced in the United States or the flatness of the curve reflected in the prices and yields of bonds held by the Fund. As a result, the Fund's hedging strategy may not perform as expected. The options used by the Fund may be riskier than other types of investments because they may be more sensitive to changes in economic or market conditions. Options create leverage because they are options, which may cause the Fund's net asset value and returns to be more volatile than they would be if the Fund was not using options. OTC options also expose the Fund to counterparty risk, which is the risk that the counterparty will not fulfill its contractual obligations. The Fund's hedging strategy is not customized to particular bonds or investment instruments. As a result, there may be a mismatch between the option and the bonds held by the Fund that are being hedged. If this were the case, the Fund could lose money on both the options and the bonds, and the present value of the Fund's portfolio investments could decrease.

Returns of Capital Distributions From the Fund Reduce the Tax Basis of Fund Shares. The Fund expects to make monthly dividend distributions. The tax character of the Fund's distributions during a taxable year is not finally determined until the Fund's income and gains are determined at the end of the year. Gains or losses realized with respect to the Fund's options trading over the course of the year will affect the tax character of distributions made during the year, including the extent to which such distributions consist of dividends, capital gains and/or return of capital.

A portion of the Fund's distributions may be treated as a return of capital for tax purposes. Return of capital distributions are not taxable income to you but reduce your tax basis in your shares of the Fund. Such a reduction in tax basis will result in larger taxable gains and/or lower tax losses on a subsequent sale of shares of the Fund. In the event that total distributions in return of capital exceed your tax basis in your shares of the Fund, such excess will be treated as capital gain.

Shareholders who periodically receive the payment of dividends or other distributions consisting of a return of capital may be under the impression that they are receiving net income from the Fund when, in fact, they are not. Shareholders should not assume that the source of the distributions is from the net income of the Fund.

Tax Risk. To qualify for the favorable U.S. federal income tax treatment accorded to a RIC under the Code, the Fund must satisfy certain income, asset diversification and distribution requirements each year. Among other requirements, the Fund must derive at least 90% of its gross income for each taxable year from certain qualifying sources of income and the Fund's assets must be diversified so that at least 50% of the value of the Fund's total assets is represented by cash and cash items,

Additional Information About the Fund

U.S. government securities, securities of other RICs, and other securities, subject to certain other limitations (See the “Taxes” section in the SAI for additional information). The Internal Revenue Service (“IRS”) has issued two private letter rulings to other unrelated funds, upon which the Fund cannot rely, which indicate that income from a fund’s investment in certain rate-linked derivatives, such as interest rate swaps, constitutes qualifying income. However, in September 2016 the IRS announced that it will no longer issue private letter rulings on questions relating to satisfaction of the qualifying income test for qualification as a RIC that require a determination of whether a financial instrument or position is a security under section 2(a)(36) of the 1940 Act. A financial instrument or position that constitutes a security under section 2(a)(36) of the 1940 Act generates qualifying income for purposes of qualifying as a RIC. If the Fund were to fail to meet the qualifying income test or asset diversification test and fail to qualify as a RIC, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income, which would adversely affect the Fund’s performance. The failure by the Fund to qualify as a RIC would have significant negative tax consequences to Fund shareholders and would significantly and adversely affect a shareholder’s return on its investment in the Fund. Under certain circumstances, the Fund may be able to cure a failure to meet the qualifying income test or asset diversification test if such failure was due to reasonable cause and not willful neglect, but to do so the Fund may incur significant fund-level taxes, which would effectively reduce (and could eliminate) the Fund’s returns. In this event, the Fund’s board of trustees may authorize a change in investment strategy or Fund liquidation and in lieu of potential disqualification, the Fund is permitted to pay the tax to cure certain failures to satisfy the income requirement or asset diversification requirement. The Fund also may incur transaction and other costs to comply with any new or additional guidance from the IRS.

U.S. Government Obligations Risk. The total public debt of the United States as a percentage of gross domestic product has grown rapidly since the beginning of the 2008–2009 financial downturn. Although high debt levels do not necessarily indicate or cause economic problems, they may create certain systemic risks if sound debt management practices are not implemented. A high national debt can raise concerns that the U.S. government will not be able to make principal or interest payments when they are due. This increase has also necessitated the need for the U.S. Congress to negotiate adjustments to the statutory debt limit to increase the cap on the amount the U.S. government is permitted to borrow to meet its existing obligations and finance current budget deficits. In August 2011, S&P lowered its long term sovereign credit rating on the U.S. In explaining the downgrade at that time, S&P cited, among other reasons, controversy over raising the statutory debt limit and growth in public spending. On February 9, 2018, following passage by Congress, the President of the United States signed the Bipartisan Budget Act of 2018, which suspends the statutory debt limit through March 1, 2019. Any controversy or ongoing uncertainty regarding the statutory debt ceiling negotiations may impact the U.S. long-term sovereign credit rating and may cause market uncertainty. As a result, market prices and yields of securities supported by the full faith and credit of the U.S. government may be adversely affected.

Valuation Risk. Financial information about the Fund’s portfolio holdings may not always be reliable, which may make it difficult to obtain a current price for the investments held by the Fund. Independent market quotations for such investments may not be readily available and securities may be fair valued or valued by a pricing service at an evaluated price. These valuations are subjective and different funds may assign different fair values to the same investment. Such valuations also may be different from what would be produced if the security had been valued using market quotations. As a result, there is a risk that the Fund may not be able to sell an investment at the price assigned to

Additional Information About the Fund

the investment by the Fund. Additionally, Fund securities that are valued using techniques other than market quotations, including “fair valued” securities, may be subject to greater fluctuations in their value from one day to the next.

Cash and Cash Equivalents Risk. The Fund may hold cash or cash equivalents. Generally, such positions offer less potential for gain than other investments. Holding cash or cash equivalents, even strategically, may lead to missed investment opportunities. This is particularly true when the market for other investments in which the Fund may invest is rapidly rising. If the Fund holds cash uninvested it will be subject to the credit risk of the depositing institution holding the cash.

Management

Investment Adviser

Krane Funds Advisors, LLC (“Krane” or “Adviser”), which is a UN PRI signatory, is a registered investment adviser located at 280 Park Avenue, 32nd Floor, New York, NY 10017 and serves as investment adviser of the Fund. Krane has served as the investment adviser of the Fund since its inception.

Under the Investment Advisory Agreement between the Trust and Krane, Krane is responsible for reviewing, supervising and administering the Fund’s investment program and the general management and administration of the Trust. In this regard, among other things, Krane arranges for transfer agency, custody, fund administration and accounting, and other non-distribution related services necessary for the Fund to operate. Krane may engage a subadviser to assist it in managing the Fund’s investments, but will be responsible for overseeing any subadvisers. Krane manages the Fund’s business affairs, provides office facilities and equipment and certain clerical, bookkeeping and administrative services, and permits its officers and employees to serve as officers or Trustees of the Trust. Under the Investment Advisory Agreement, Krane bears all of its own costs associated with providing advisory services to the Fund. In addition, Krane has contractually agreed to pay all operating expenses of the Fund, except (i) interest and taxes (including, but not limited to, income, excise, transaction, transfer and withholding taxes); (ii) expenses of the Fund incurred with respect to the acquisition and disposition of portfolio securities and the execution of portfolio transactions, including brokerage commissions and short sale dividend or interest expense; (iii) expenses incurred in connection with any distribution plan adopted by the Trust in compliance with Rule 12b-1 under the 1940 Act, including distribution fees; (iv) Acquired Fund Fees and Expenses; (v) litigation expenses; (vi) the compensation payable to the Adviser under the investment advisory agreement; (vii) compensation and expenses of the Independent Trustees (including any Trustees’ counsel fees); and (viii) any expenses determined to be extraordinary expenses by the Board. Nevertheless, there exists a risk that a Trust service provider will seek recourse against the Trust if is not timely paid by Krane for the fees and expenses for which it is responsible, which could materially adversely affect the Fund.

Under the Investment Advisory Agreement, the Fund pays Krane the fee shown in the table below, which is calculated daily and paid monthly, at an annual rate based on a percentage of the average daily net assets of the Fund.

Quadratic Deflation ETF*	0.99%
--------------------------	-------

* *Krane has contractually agreed to waive its management fee by 0.05% of the Fund’s average daily net assets. This contractual fee waiver will continue until August 1, 2022, and may only be terminated prior thereto by the Board.*

The Investment Advisory Agreement has been approved by the Board of Trustees and shareholders of the Fund (in this regard, Krane as the sole initial shareholder of the Fund will approve various matters and agreements, including the Investment Advisory Agreement for the Fund prior to its public offering).

A discussion regarding the basis for the Board’s approval of the Fund’s investment advisory agreement with Krane will be available in the Fund’s initial Report to Shareholders.

China International Capital Corporation (USA) Holdings Inc., a wholly-owned, indirect subsidiary of China International Capital Corporation Limited owns a majority stake in Krane. As of April 30, 2021, Central Huijin Investment Limited, a mainland Chinese-domiciled entity, and HKSCC Nominees

Management

Limited, held approximately 40.17% and 30.74%, respectively, of the shares of China International Capital Corporation Limited. Central Huijin Investment Limited is a wholly-owned subsidiary of China Investment Corporation, which is a mainland Chinese sovereign wealth fund. KFA One Holdings, LLC, located at 280 Park Avenue, 32nd Floor, New York, NY 10017, holds the remaining equity interests in Krane and Jonathan Krane, through his equity interests in KFA One Holdings, LLC, beneficially owns more than 10% of the equity interests in Krane.

Sub-Adviser

The Adviser has retained Quadratic Capital Management LLC (“Quadratic” or “Sub-Adviser”) to serve as sub-adviser to the Fund. Quadratic is responsible for the day-to-day management of the Fund. Quadratic, a registered investment adviser, is controlled by its Managing Partner and CIO, Nancy Davis. Quadratic, a registered Small/Minority Business Enterprise and a majority woman-owned firm, is a member of the SASB Alliance and supports the elevation of financially material ESG standards. Quadratic’s principal office is located at 39 Lewis Street, 4th Floor, Greenwich, Connecticut 06830. Quadratic was formed in 2013 and provides discretionary investment management services to Quadratic Interest Rate Volatility and Inflation Hedge ETF (in addition to the Fund) and separately managed accounts, and, has previously provided such services to limited partnerships, offshore investment companies, and other collective investment vehicles that were offered to investors on a private placement basis. The Sub-Adviser is responsible for trading portfolio instruments for the Fund, including selecting broker-dealers to execute purchase and sale transactions, subject to the supervision of the Adviser and the Board.

A discussion regarding the basis for the Board’s approval of the investment sub-advisory agreement with Quadratic will be available in the Fund’s initial Report to Shareholders.

From time to time, a manager, analyst, or other employee of Quadratic or its affiliates may express views regarding a particular asset class, company, security, industry, or market sector. The views expressed by any such person are the views of only that individual as of the time expressed and do not necessarily represent the views of Quadratic or any other person within the Quadratic organization. Any such views are subject to change at any time based upon market or other conditions and Quadratic disclaims any responsibility to update such views. These views may not be relied on as investment advice and, because investment decisions for the Fund are based on numerous factors, may not be relied on as an indication of trading intent on behalf of the Fund.

Portfolio Manager

Nancy Davis is the Managing Partner and CIO of Quadratic, which she founded in 2013. Ms. Davis began her career at Goldman Sachs, where she spent nearly ten years, the last seven at the proprietary trading group where she became Head of Credit, Derivatives and OTC Trading. Prior to starting Quadratic, she served as a portfolio manager at Highbridge where she managed \$500 million of capital in a derivatives-only portfolio. She later served in a senior executive role at AllianceBernstein. Ms. Davis writes and speaks frequently about financial topics and world markets. She has been published in Financial News, Absolute Return, and Institutional Investor and has contributed papers to two books. Ms. Davis holds a B.A. magna cum laude in Economics from George Washington University, where she was a recipient of the Presidential Academic Scholarship.

Additional information about the Portfolio Manager’s compensation, other accounts managed by the Portfolio Manager and the Portfolio Manager’s ownership of Fund shares is available in the SAI.

Management

Other Service Providers

SEI Investments Global Funds Services (“Administrator”) serves as administrator for the Fund. The Administrator provides necessary administrative and accounting services for the maintenance and operations of the Trust and the Fund, and makes available the office space, equipment, personnel and facilities required to provide such services.

SEI Investments Distribution Co. (“Distributor”), an affiliate of the Administrator, serves as the Fund’s distributor. Shares in less than Creation Units are not distributed by the Distributor, and the Distributor does not maintain a secondary market in the shares of the Fund.

Brown Brothers Harriman & Co. (“BBH”) serves as custodian and transfer agent for the Fund. BBH maintains in separate accounts cash, securities and other assets of the Fund, keeps all necessary accounts and records, and provides other services.

Shareholder Information

Calculating NAV

The Fund calculates its NAV by:

- Taking the current market value of its total assets
- Subtracting any liabilities and withholdings (if any)
- Dividing that amount by the total number of shares owned by the shareholders

The Fund normally calculates NAV as of the regularly scheduled close of normal trading on each day that the NYSE is scheduled to be open for business (a “Business Day”) (normally, 4:00 p.m., Eastern time). Any assets or liabilities denominated in currencies other than the U.S. dollar are converted into U.S. dollars at the current market rates on the date of valuation as quoted by one or more sources.

Securities listed on a securities exchange (i.e. exchange-traded equity securities), market or automated quotation system for which quotations are readily available (except for securities traded on NASDAQ), including securities traded over the counter, are valued by the Fund’s independent pricing agents at the last reported sale price on the primary exchange or market (foreign or domestic) on which they are traded (or at the time as of which the Fund’s NAV is calculated if a security’s exchange is normally open at that time). If there is no such reported sale, such securities are valued at the most recently reported bid price. For securities traded on NASDAQ, the NASDAQ Official Closing Price will be used. If a security price cannot be obtained from an independent, third-party pricing agent, the Fund seeks to obtain bid and ask prices from two broker-dealers who make a market in the portfolio instrument and determines the average of the two.

If available, debt securities are priced based upon valuations provided by independent third-party pricing agents. Such values generally reflect the last reported sales price if the security is actively traded. The third-party pricing agents may also value debt securities at an evaluated bid price by employing methodologies that utilize actual market transactions, broker-supplied valuations, or other methodologies designed to identify the market value for such securities. Debt obligations with remaining maturities of sixty days or less may be valued at their amortized cost, which approximates market value.

The prices for foreign securities are reported in local currency and converted to U.S. dollars using currency exchange rates. The exchange rates used for valuation are captured as of the close of the London Stock Exchange each day normally at 4:00 p.m. Greenwich Mean Time.

The value of a swap contract is equal to the obligation (or rights) under the swap contract, which will generally be equal to the net amounts to be paid or received under the contract based upon the relative values of the positions held by each party to the contract as determined by the applicable independent, third party pricing agent. Exchange-traded options are valued at the last reported sales price on the exchange on which they are listed. If there is no such reported sale on the valuation date, long positions are valued at the most recent bid price, and short positions are valued at the most recent ask price. Over-the-counter (“OTC”) options are valued based upon prices determined by the applicable independent, third party pricing agent. Futures are valued at the settlement price established by the board of trade on which they are traded. Foreign currency forward contracts are valued at the current day’s interpolated foreign exchange rate, as calculated using the current day’s spot rate and the 30-, 60-, 90- and 180-day forward rates provided by an independent pricing agent.

Shareholder Information

Investments in open-end investment companies that do not trade on an exchange are valued at the end of day NAV per share. Investments in open-end investment companies that trade on an exchange are valued in the same manner as other exchange-traded equity securities (described above).

Securities for which market prices are not “readily available,” or are not deemed to reflect current market values, or are debt securities where no evaluated price is available from the Trust’s third-party pricing agents pursuant to established methodologies, are fair valued in accordance with the Trust’s valuation policies and procedures approved by the Board of Trustees. Some of the more common reasons that may necessitate that a security be valued using “fair value” pricing may include, but are not limited to: the security’s trading has been halted or suspended; the security’s primary trading market is temporarily closed; or the security has not been traded for an extended period of time.

In addition, the Fund may fair value its securities if an event that may materially affect the value of the Fund’s securities that trade outside of the United States (a “Significant Event”) has occurred between the time of the security’s last close and the time that the Fund calculates its NAV. A Significant Event may relate to a single issuer or to an entire market sector, country or region. Events that may be Significant Events may include: government actions, natural disasters, armed conflict, acts of terrorism and significant market fluctuations. If Krane becomes aware of a Significant Event that has occurred with respect to a portfolio instrument or group of portfolio instruments after the closing of the exchange or market on which the portfolio instrument or portfolio instruments principally trade, but before the time at which the Fund calculates its NAV, it will notify the Administrator and may request that an ad hoc meeting of the Fair Valuation Committee be called.

With respect to trade-halted securities, the Trust typically will fair value a trade-halted security by adjusting the security’s last market close price by the security’s sector performance, as measured by a predetermined index, unless Krane recommends and the Trust’s Fair Valuation Committee determines to make additional adjustments.

Fair value pricing involves subjective judgments and it is possible that a fair value determination for a security is materially different than the value that could actually be realized upon the sale of the security or that another fund that uses market quotations or its own fair value procedures to price the same securities.

Trading in securities on many foreign exchanges is normally completed before the close of business on each Business Day. In addition, securities trading in a particular country or countries may not take place on each Business Day or may take place on days that are not Business Days. Changes in valuations on certain securities may occur at times or on days on which the Fund’s NAV is not calculated and on which Fund shares do not trade and sales and redemptions of shares do not occur. As a result, the value of the Fund’s portfolio securities and the net asset value of its shares may change on days when share purchases or sales cannot occur.

Buying and Selling Fund Shares

Shares of the Fund may be purchased or redeemed directly from the Fund only in Creation Units or multiples thereof. Only a broker-dealer (“Authorized Participant”) that enters into an Authorized Participant Agreement with the Fund’s distributor, SEI Investments Distribution Co. (the “Distributor”), may engage in creation and redemption transactions directly with the Fund. Purchases and redemptions directly with the Fund must follow the Fund’s procedures, and are subject to transaction

Shareholder Information

fees, which are described in the SAI Orders for such transactions may be rejected or delayed if they are not submitted in good order and subject to the other conditions set forth in this prospectus and the SAI. Please see the SAI for more information about purchases and redemptions of Creation Units.

Once purchased (i.e., created) by an Authorized Participant, shares are listed on the Exchange and trade in the secondary market. When you buy or sell the Fund's shares in the secondary market, you will pay or receive the market price. The price at which you buy or sell Shares (i.e., the market price) may be more or less than the NAV of the Shares. Unless imposed by your broker, there is no minimum dollar amount you must invest in the Fund and no minimum number of Shares you must buy. Shares can be bought and sold throughout the trading day like other publicly traded securities. Most investors will buy and sell shares through a broker and, thus, will incur customary brokerage commissions and charges when buying or selling shares. **Except when aggregated in Creation Units, Shares are not redeemable by the Fund.**

The secondary markets are closed on weekends and also are generally closed on the following holidays: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day (observed), Independence Day, Labor Day, Columbus Day, Veterans' Day, Thanksgiving Day, and Christmas Day.

For more information on how to buy and sell shares of the Fund, call 1.855.857.2638 or visit www.bnddetc.com.

Premium/Discount Information

Information showing the number of days the market price of the Fund's shares was greater than the Fund's NAV per share (i.e., at a premium) and the number of days it was less than the Fund's NAV per share (i.e., at a discount) for various time periods will be available by visiting the Fund's website at www.bnddetc.com. The premium and discount information contained on the website will represent past performance and cannot be used to predict future results.

Portfolio Holdings Information

Each day the Fund is open for business, the Trust will publicly disseminate the Fund's full portfolio holdings as of the close of the previous day through the website. A description of the Fund's policies and procedures with respect to the disclosure of Fund portfolio securities holdings is available in the Fund's Statement of Additional Information ("SAI"). The holdings of the Fund can be found on the Fund's website at www.bnddetc.com.

Active Investors and Market Timing

The Trust's Board of Trustees has determined not to adopt policies and procedures designed to prevent or monitor for frequent purchases and redemptions of the Fund's shares because the Fund sells and redeems its shares at NAV only in Creation Units pursuant to the terms of an Authorized Participant Agreement between the Authorized Participant and the Distributor, and such direct trading between the Fund and Authorized Participants is critical to ensuring that the Fund's shares trade at or close to NAV. Further, the vast majority of trading in Fund shares occurs on the secondary market, which does not involve the Fund directly and therefore does not cause the Fund to experience many of the harmful effects of market timing, such as dilution and disruption of portfolio management. In addition, the Fund imposes a transaction fee on Creation Unit transactions, which is designed to offset transfer and other transaction costs incurred by the Fund in connection with the issuance and

Shareholder Information

redemption of Creation Units and may employ fair valuation pricing to minimize potential dilution from market timing. The Fund reserves the right to reject any purchase order at any time and reserves the right to impose restrictions on disruptive, excessive, or short-term trading.

Investments by Registered Investment Companies

Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies, including shares of the Fund. Registered investment companies are permitted to invest in the Fund beyond the limits set forth in Section 12(d)(1) subject to certain terms and conditions set forth in SEC exemptive relief, including that such investment companies enter into an agreement with the Fund. However, since the Fund does not currently intend to limit its investments in other investment companies as required by Section 12(d)(1), other registered investment companies generally will not be able to invest in the Fund in reliance on the exemptive relief. This policy is subject to change.

Continuous Offering

The method by which Creation Units of Fund shares are created and traded may raise certain issues under applicable securities laws. Because new Creation Units of shares are issued and sold by the Fund on an ongoing basis, a “distribution,” as such term is used in the Securities Act, may occur at any point. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery requirement and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent shares and sells the shares directly to customers or if it chooses to couple the creation of a supply of new shares with an active selling effort involving solicitation of secondary market demand for shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a characterization as an underwriter.

Broker-dealer firms should also note that dealers who are not “underwriters” but are effecting transactions in shares, whether or not participating in the distribution of shares, are generally required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker-dealer firms should note that dealers who are not “underwriters” but are participating in a distribution (as contrasted with engaging in ordinary secondary market transactions) and thus dealing with the shares that are part of an overallotment within the meaning of Section 4(3)(C) of the Securities Act, will be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. For delivery of prospectuses to exchange members, the prospectus delivery mechanism of Rule 153 under the Securities Act is only available with respect to transactions on a national exchange.

Dealers effecting transactions in the Fund's shares, whether or not participating in this distribution, are generally required to deliver a Prospectus. This is in addition to any obligation of dealers to deliver a Prospectus when acting as underwriters.

Shareholder Information

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), Krane, Quadratic or an affiliate may pay the intermediary for marketing activities or other services related to the sale or promotion of the Fund. These payments may create a conflict of interest by influencing the broker-dealer or other financial intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Distribution Plan

The Fund has adopted a Distribution Plan (the "Plan") that allows the Fund to pay distribution fees to the Distributor and other firms that provide distribution services ("Service Providers"). Under the Plan, if a Service Provider provides distribution services, the Fund would pay distribution fees to the Distributor at an annual rate not to exceed 0.25% of average daily net assets, pursuant to Rule 12b-1 under the 1940 Act. The Distributor would, in turn, pay the Service Provider out of its fees. The Board of Trustees currently has determined not to implement any 12b-1 fees pursuant to the Plan. 12b-1 fees may only be imposed after approval by the Board of Trustees. Because any distribution fees would be paid out of the Fund's assets on an on-going basis, if payments are made in the future, the distribution fees would increase the cost of your investment and may cost you more than paying other types of sales charges.

Householding Policy

To reduce expenses, we mail only one copy of the prospectus or summary prospectus, each annual and semi-annual report, and any proxy statements to each address shared by two or more accounts with the same last name or that the Trust reasonably believes are members of the same family. If you wish to receive individual copies of these documents, please call the Trust at 1.855.857.2638 between the hours of 8:30 a.m. and 6:00 p.m. Eastern Time on days the Fund is open for business or contact your financial institution. We will begin sending you individual copies thirty days after receiving your request. **Investors who hold their shares through an intermediary are subject to the intermediary's policies. Contact your financial intermediary for any questions you may have.**

Dividends and Distributions

The Fund pays out to its shareholders any net investment income and net realized capital gains. Ordinarily, the Fund typically distributes any net investment income monthly and makes any capital gain distributions once a year (usually in December). The Fund may make distributions on a more frequent basis. The Fund reserves the right to declare special distributions, including if, in its reasonable discretion, such action is necessary or advisable to preserve the status of the Fund as a regulated investment company under Subchapter M of the Code, to avoid imposition of income or excise taxes on undistributed income.

Additional Tax Information

The following is a summary of some important tax issues that affect the Fund and its shareholders. The summary is based on current tax laws, which may be changed by legislative, judicial or administrative action. You should not consider this summary to be a detailed explanation of the tax treatment of the Fund, or the tax consequences of an investment in the Fund. **More information about taxes is located in the SAI. You are urged to consult your tax adviser regarding specific questions as to federal, state and local income taxes.**

Tax Status of the Fund

The Fund is treated as a separate entity for federal tax purposes, and intends to qualify for the special tax treatment afforded to regulated investment companies. As long as the Fund qualifies for treatment as a regulated investment company, it pays no federal income tax on the earnings it distributes to shareholders.

Tax Status of Distributions

The Fund will, at least annually, distribute substantially all of its net investment taxable income and net capital gains.

The income dividends you receive from the Fund (which include the Fund's short-term capital gains) will be taxed as either ordinary income or qualified dividend income. For non-corporate shareholders, dividends that are reported as qualified dividend income are generally taxable at reduced maximum tax rates to the extent that the Fund receives qualified dividend income and subject to certain limitations and holding period requirements. The Fund does not expect to pay significant dividends reportable as qualified dividend income. The Fund expects that most of its income will be ordinary income because the assets underlying the rate-linked derivative instruments in which it invests are not capital assets. Additionally, the Fund expects that its losses with respect to its investment in rate-linked derivative instruments will be ordinary losses, which can only be used to offset ordinary income earned by the Fund in the same taxable year in which the losses occur, subject to an exception for late-year losses.

Distributions of the Fund's short-term capital gains are generally taxable as ordinary income. Any distributions of net capital gain (the excess of the Fund's net long-term capital gains over its net short-term capital losses) are taxable as long-term capital gains regardless of how long you have owned your shares. Long-term capital gains are taxable at reduced maximum tax rates.

The Fund may make distributions to shareholders in excess of the Fund's current and accumulated earnings and profits in some taxable years. In such event, the excess distribution received by a shareholder will be treated as a return of capital to the extent of the shareholder's tax basis in its shares, and thereafter as capital gain. A return of capital reduces a shareholder's tax basis in its shares, thus reducing any loss or increasing any gain on a subsequent taxable disposition by the shareholder of its shares.

The tax character of the Fund's distributions during a taxable year is not finally determined until the Fund's income and gains are determined at the end of the year. Gains or losses realized with respect to the Fund's options trading over the course of the year will affect the tax character of distributions made during the year, including the extent to which such distributions consist of dividends and/or return of capital.

Additional Tax Information

The Fund may invest in complex securities. These investments may be subject to numerous special and complex rules. These rules could affect whether gains and losses recognized by the Fund are treated as ordinary income or capital gain, accelerate the recognition of income to the Fund and/or defer the Fund's ability to recognize losses. In turn, these rules may affect the amount, timing or character of distributions you receive from the Fund.

Dividends and distributions are generally taxable to you whether you receive them in cash or in additional shares. Corporate shareholders may be entitled to a dividends-received deduction for the portion of dividends they receive that is attributable to dividends received by the Fund from U.S. corporations, subject to certain limitations. The Fund does not expect to pay significant dividends eligible for the dividends-received deduction.

Distributions paid in January but declared by the Fund in October, November or December of the previous year may be taxable to you in the previous year. Your broker will inform you of the amount of your ordinary income dividends, qualified dividend income, and capital gains distributions shortly after the close of each calendar year.

If you lend your Fund shares pursuant to securities lending arrangements, you may lose the ability to treat the Fund's dividends (paid while the shares are held by the borrower) as qualified dividend income. Consult your financial intermediary or tax adviser.

Some foreign governments levy withholding taxes against dividend and interest income. Although in some countries a portion of these withholding taxes is recoverable, the non-recovered portion will reduce the income received from the securities in the Fund.

If you hold your shares in a tax-qualified retirement account, you generally will not be subject to federal taxation on income received with respect to the shares (including Fund dividends and distributions, and any gain on the sale of shares), until you begin receiving payments from your retirement account. You should consult your tax adviser regarding the tax rules that apply to your retirement account.

Tax Status of Share Transactions

Any capital gain or loss upon a sale of the Fund's shares is generally treated as a long-term gain or loss if the shares have been held for more than one year and as a short-term gain or loss if held for one year or less. Any capital loss on the sale of the Fund's shares held for six months or less is treated as a long-term capital loss to the extent that any capital gain distributions were paid with respect to such shares.

Medicare Contribution Tax

U.S. individuals with income exceeding \$200,000 (\$250,000 if married and filing jointly) are subject to a 3.8% Medicare contribution tax on all or a portion of their "net investment income," including interest, dividends, and certain capital gains (including capital gains realized on the sale or exchange of shares of the Fund). This 3.8% tax also applies to all or a portion of the undistributed net investment income of certain shareholders that are estates and trusts.

Back-Up Withholding

The Fund will be required in certain cases to withhold at applicable withholding rates (currently 24%) and remit to the U.S. Treasury the amount withheld on amounts payable to any shareholder who (1) has provided the Fund either an incorrect tax identification number or no number at all,

Additional Tax Information

(2) is subject to back-up withholding by the Internal Revenue Service (“IRS”) for failure to properly report payments of interest or dividends, (3) has failed to certify to the Fund that such shareholder is not subject to back-up withholding, or (4) has not certified that such shareholder is a U.S. person (including a U.S. resident alien).

Non-U.S. Investors

If you are not a citizen or permanent resident of the United States or if you are a non-U.S. entity, the Fund’s ordinary income dividends (which include distributions of net short-term capital gains) will generally be subject to a 30% U.S. withholding tax, unless a lower treaty rate applies, although that withholding tax will generally not apply to any gain or income realized by a non-U.S. shareholder in respect of any distributions of long-term capital gains or upon the sale or other disposition of shares of the Fund. The withholding tax also will not apply to any interest-related dividends and short-term capital gain dividends reported by the Fund. You also may potentially be subject to U.S. federal estate taxes.

A 30% withholding tax will generally be imposed on dividends paid by the Fund to (i) foreign financial institutions including non-U.S. investment funds unless they agree to collect and disclose to the IRS, or the tax authorities in their home jurisdictions, information regarding their direct and indirect U.S. account holders and (ii) certain other foreign entities, unless they certify certain information regarding their direct and indirect U.S. owners. A non-U.S. shareholder may be exempt from the withholding described in this paragraph under an intergovernmental agreement between the United States and a foreign government, provided that the shareholder and the applicable foreign government comply with the terms of such agreement. Proposed regulations (which are effective while pending) eliminate the application of the Foreign Account Tax Compliance Act (“FATCA”) withholding tax to capital gain dividends and redemption proceeds that was scheduled to take effect in 2019.

State Tax Considerations

In addition to federal taxes, distributions by the Fund and ownership of the Fund’s shares may be subject to state and local taxes. You should consult your tax adviser regarding how state and local tax laws affect your investment in the Fund’s shares.

Taxes on Creations and Redemptions of Creation Units

A person who purchases a Creation Unit by exchanging securities in-kind generally will recognize a gain or loss equal to the difference between (i) the sum of the market value of the Creation Units at the time of the exchange and any net amount of cash received by the Authorized Participant in the exchange and (ii) the sum of the purchaser’s aggregate basis in the securities surrendered and any net amount of cash paid for the Creation Units. A person who redeems Creation Units and receives securities in-kind from the Fund will generally recognize a gain or loss equal to the difference between the redeemer’s basis in the Creation Units, and the aggregate market value of the securities received and any net cash received. The IRS, however, may assert that a loss realized upon an in-kind exchange of securities for Creation Units or an exchange of Creation Units for securities cannot be deducted currently under the rules governing “wash sales,” or on the basis that there has been no significant change in economic position. Persons effecting in-kind creations or redemptions should consult their own tax adviser with respect to these matters.

Additional Tax Information

The Fund has the right to reject an order for Creation Units if the purchaser (or a group of purchasers) would, upon obtaining the shares so ordered, own 80% or more of the outstanding shares of the Fund and if, pursuant to section 351 of the Code, the Fund would have a basis in the deposit securities different from the market value of such securities on the date of deposit. The Fund also has the right to require information necessary to determine beneficial share ownership for purposes of the 80% determinations.

Disclaimers

Krane, Quadratic and Trust Disclaimer

Krane, Quadratic and the Fund make no representation or warranty, express or implied, to the owners of shares of the Fund or any members of the public or as to the advisability of investing in securities generally or in the Fund particularly. Krane and Quadratic expressly disclaim all warranties of merchantability or fitness for a particular purpose or use with respect to the Fund. Without limiting any of the foregoing, in no event shall Krane or Quadratic have any liability for any special, punitive, direct, indirect or consequential damages (including lost profits), even if notified of the possibility of such damages.

NYSE Arca, Inc. Disclaimer

Shares of the Fund are not sponsored, endorsed or promoted by NYSE Arca, Inc. ("NYSE Arca"). NYSE Arca makes no representation or warranty, express or implied, to the owners of the shares of the Fund or any member of the public regarding the ability of the Fund to meet its investment objective. NYSE Arca is not responsible for, nor has it participated in the determination of the timing of, prices of, or quantities of shares of the Fund to be issued, nor in the determination or calculation of the equation by which the shares are redeemable. NYSE Arca has no obligation or liability to owners of the shares of the Fund in connection with the administration, marketing or trading of the shares of the Fund.

NYSE Arca makes no warranty, express or implied, as to results to be obtained by the Trust on behalf of the Fund as licensee, licensee's customers and counterparties, owners of the shares of the Fund, or any other person or entity from the use of the subject index or any data included therein in connection with the rights licensed as described herein or for any other use. Without limiting any of the foregoing, in no event shall NYSE Arca have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

Financial Highlights

No financial highlights are available for the Fund because the Fund had not commenced operations prior to the end of the prior fiscal year.

Additional Information

Additional and more detailed information about the Fund is included in the SAI dated September 17, 2021. The SAI has been filed with the SEC and is incorporated by reference into this Prospectus and, therefore, legally forms a part of this Prospectus. The SEC maintains the EDGAR database on its website ("<http://www.sec.gov>") that contains the SAI, material incorporated by reference, and other information regarding registrants that file electronically with the SEC. Copies of this information may be obtained, after paying a duplicating fee, by electronic request at the following e-mail address: publicinfo@sec.gov.

You may obtain a copy of the SAI or the Annual or Semi-Annual Reports or make inquiries, without charge by calling 1.855.857.2638, visiting www.bnddetf.com, or writing the Trust at 280 Park Avenue, 32nd Floor, New York, NY 10017. Additional information about the Fund's investments will be available in the Annual and Semi-Annual Reports. Also, in the Fund's Annual Report, you will find a discussion of the market conditions and investment strategies that significantly affected the Fund's performance during its last fiscal year.

No one has been authorized to give any information or to make any representations not contained in this Prospectus or in the Fund's SAI in connection with the offering of Fund shares. Do not rely on any such information or representations as having been authorized by the Fund, Krane or the sub-adviser, as applicable. This Prospectus does not constitute an offering by the Fund in any jurisdiction where such an offering is not lawful.

The Trust enters into contractual arrangements with various parties, including among others, the Fund's investment adviser, sub-adviser(s) (if applicable), distributor, custodian, and transfer agent who provide services to the Fund. Shareholders are not parties to any such contractual arrangements or intended beneficiaries of those contractual arrangements, and those contractual arrangements are not intended to create in any shareholder any right to enforce them against the service providers or to seek any remedy under them against the service providers, either directly or on behalf of the Trust.

This prospectus provides information concerning the Fund that you should consider in determining whether to purchase Fund shares. Neither this prospectus nor the SAI is intended, or should be read, to be or give rise to an agreement or contract between the Trust, the Trustees, or the Fund and any investor, or to give rise to any rights in any shareholder or other person other than any rights under federal or state law that may not be waived.

The Trust's Investment Company Act file number is 811-22698.
