

## KFA Mount Lucas Index Strategy ETF

### Investment Strategy:

KMLM is benchmarked to the KFA MLM Index, which consists of a portfolio of twenty-two liquid futures contracts traded on U.S. and foreign exchanges. The Index includes futures contracts on 11 commodities, 6 currencies, and 5 global bond markets. These three baskets are weighted by their relative historical volatility, and within each basket, the constituent markets are equal dollar weighted.

### KMLM Features:

- Access to managed futures through a liquid and low-cost ETF structure<sup>1</sup>
- Managed futures are considered alternative investments and may provide additional diversification and decrease volatility when included within traditional equity/bond portfolios<sup>2</sup>
- A potential hedge on equity, bond, and commodity risk
- Sub-advised by Mount Lucas Management, who in 1988 established the first passive index to measure the returns to risk bearing in futures markets<sup>3</sup>

### KMLM Partner:

Mount Lucas Management, the sub-advisor of KMLM, is a Newtown, PA based asset manager founded in 1986. Since its founding, Mount Lucas has provided innovative alternative investment strategies to institutional and high-net-worth investors that enhance and diversify traditional investments. Mount Lucas' investment professionals have extensive experience in the development and use of systematic investment strategies that access alternative risk premia as well as a long history of discretionary macro trading and risk taking.

1. Buying and selling shares of the KFA Funds may result in brokerage commissions.
2. Diversification does not ensure a profit or guarantee against a loss.
3. Data from Mount Lucas Management.

### Managed Futures Overview:

- **What are managed futures?** Futures markets were created over 150 years ago for a single purpose, to facilitate the transfer of price risk away from producers and consumers. By participating in the futures markets, a managed futures portfolio acts as an important market participant, accepting that price risk and providing liquidity to commercial interests. Futures markets are traded on public exchanges and are based on a standardized futures contracts in equities, bonds, currencies, and commodities.
- **What are the potential benefits of investing in managed futures?** The primary benefit of investing in managed futures is the mitigation of portfolio risk through an uncorrelated asset class. Further, during periods of market stress, managed futures has historically shown greater potential for negative correlations. Institutional investors may employ an active futures manager for a variety of reasons. However, investors of all types may use managed futures to diversify risks in a portfolio that does not already consist of derivatives.
- **Who are active futures managers?** Active futures managers are highly trained individuals who have been designated by the Commodities Futures Trading Commission (CFTC) as commodities trading advisors (CTAs). These individuals trade futures contracts on a wide array of commodities and/or other assets on behalf of clients.

The KFA Funds product suite delivers differentiated, high-conviction investment strategies to global investors. We are passionate about identifying groundbreaking capital market opportunities and developing them into investment vehicles that offer a source of non-traditional diversification to our clients. Krane Funds Advisors, LLC is majority owned by China International Capital Corporation (CICC).

### About Mount Lucas Management

Mount Lucas Management, the sub-advisor of KMLM, is a Newtown, PA based asset manager founded in 1986. Since its founding, Mount Lucas has provided innovative alternative investment strategies to institutional and high-net-worth investors that enhance and diversify traditional investments. Mount Lucas' investment professionals have extensive experience in the development and use of systematic investment strategies that access alternative risk premia as well as a long history of discretionary macro trading and risk taking.

**Carefully consider the Funds' investment objectives, risk factors, charges and expenses before investing. This and additional information can be found in the Funds' full and summary prospectus, which may be obtained by visiting [www.kfafunds.com](http://www.kfafunds.com). Read the prospectus carefully before investing.**

**Risk Disclosures:**

Investing involves risk, including possible loss of principal. There can be no assurance that a Fund will achieve its stated objectives.

The Fund may invest in derivatives, which are often more volatile than other investments and may magnify the Fund's gains or losses. A derivative (i.e., futures/forward contracts, swaps, and options) is a contract that derives its value from the performance of an underlying asset. The primary risk of derivatives is that changes in the asset's market value and the derivative may not be proportionate, and some derivatives can have the potential for unlimited losses. Derivatives are also subject to liquidity and counterparty risk. The Fund is subject to liquidity risk, meaning that certain investments may become difficult to purchase or sell at a reasonable time and price. If a transaction for these securities is large, it may not be possible to initiate, which may cause the Fund to suffer losses. Counterparty risk is the risk of loss in the event that the counterparty to an agreement fails to make required payments or otherwise comply with the terms of the derivative.

Fluctuations in currency of foreign countries may have an adverse effect to domestic currency values. The use of futures contracts is subject to special risk considerations. The primary risks associated with the use of futures contracts include: (a) an imperfect correlation between the change in market value of the reference asset and the price of the futures contract; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the inability to predict correctly the direction of market prices, interest rates, currency exchange rates and other economic factors; and (e) if the Fund has insufficient cash, it may have to sell securities or financial instruments from its portfolio to meet daily variation margin requirements, which may lead to the Fund selling securities or financial instruments at a loss.

The Fund invests through a subsidiary, and is indirectly exposed to the risks associated with the Subsidiary's investments. Since the Subsidiary is organized under the law of the Cayman Islands and is not registered with the SEC under the Investment Company Act of 1940, as such the Fund will not receive all of the protections offered to shareholders of registered investment companies. The Fund and the Subsidiary will be considered commodity pools upon commencement of operations, and each will be subject to regulation under the Commodity Exchange Act and CFTC rules. Commodity pools are subject to additional laws, regulations and enforcement policies, which may increase compliance costs and may affect the operations and performance of the Fund and the Subsidiary. Futures and other contracts may have to be liquidated at disadvantageous times or prices to prevent the Fund from exceeding any applicable position limits established by the CFTC. The value of a commodity-linked derivative investment typically is based upon the price movements of a physical commodity and may be affected by changes in overall market movements, volatility of the Index, changes in interest rates, or factors affecting a particular industry or commodity.

The Fund is subject to interest rate risk, which is the chance that bonds will decline in value as interest rates rise. The Fund is subject to liquidity risk, meaning that certain investments may become difficult to purchase or sell at a reasonable time and price. If a transaction for these securities is large, it may not be possible to initiate which may cause the Fund to suffer losses. Narrowly focused investments typically exhibit higher volatility. The Fund's assets are expected to be concentrated in a sector, industry, market, or group of concentrations to the extent that the Underlying Index has such concentrations. The securities or futures in that concentration could react similarly to market developments. Thus, the Fund is subject to loss due to adverse occurrences that affect that concentration. KMLM is non-diversified.

ETF shares are bought and sold on an exchange at market price (not NAV) and are not individually redeemed from the Fund. However, shares may be redeemed at NAV directly by certain authorized broker-dealers (Authorized Participants) in very large creation/redemption units. The returns shown do not represent the returns you would receive if you traded shares at other times. Shares may trade at a premium or discount to their NAV in the secondary market. Brokerage commissions will reduce returns. Beginning 12/23/2020, market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates the current NAV per share. Prior to that date, market price returns were based on the midpoint between the Bid and Ask price. NAVs are calculated using prices as of 4:00 PM Eastern Time.

The KraneShares ETFs, KFA Funds ETFs, and KraneShares Mutual Funds are distributed by SEI Investments Distribution Company (SIDCO), 1 Freedom Valley Drive, Oaks, PA 19456, which is not affiliated with Krane Funds Advisors, LLC, the Investment Adviser for the Funds, or any sub-advisers for the Funds.
